

Why Choose E-learning Foundry Web-Based Training?

Interactivity is more than clicking the “next” button. Web-based training is more than watching TV. Our goal is to reduce your training costs and increase the use of software in the classroom. We focus on producing and deploying superior web-based training to achieve this. Our courses are affordable, interactive, and effective, and are unmatched in the school software industry. Compare our offerings to the alternatives and we’re sure you’ll agree.

Better than books

Books are excellent reference material but they lack the interactivity that will keep the learner engaged in the learning experience. E-learning Foundry courses have plenty of text but they also have plenty of interactivity. Learners are involved in the training experience through demonstrations, simulations, exercises, and tests.

Better than CD/DVD ROM training

CD and DVD ROM training is often a series of videos that show learners how tasks are executed. This is good reference material but poor training. There's little in the way of interactivity to engage the learner. Look at it this way: would you pay good money to sit in a training class if the instructor made you watch a video for 8 hours? Probably not.

Better than online videos

Online videos are exactly that: videos. They are effective reference material but they shouldn't be confused with training. There's no opportunity to try the software in a controlled environment. There are no scored tests that allow the learner to verify that they’re making progress. There's little interactivity to keep the learner engaged (unless you count clicking PLAY and PAUSE as interactivity).

Our web-based training courses include video demonstrations where they are appropriate. Demonstrations are large (640 X 480) physically but more compact than QuickTime movies. No need to squint at a tiny video or wait for a large QuickTime movie to download.

With E-learning Foundry web-based training you get superior video demonstrations as well as explanations, simulations, exercises, and tests.

A reasonable alternative to in-class training

We love in-class training and produce blended learning packages for schools and school boards. However, in-class training requires travel, strict schedules, and (without the appropriate reference material) may not stick for more than a few days. With our web-based training, learners can study in the comfort of their own home or office whenever they want and review the material as often as they like.

How does our training compare?

Benefit	E-learning Foundry	Books	CDs/DVDs	In-class training	Online videos
Available 24/7	x	x	x		x
Self-paced	x	x	x		x
Interactive	x			x	
Available to many users at once	x				x
Measurable results	x			x	
Training, not reference material	x			x
